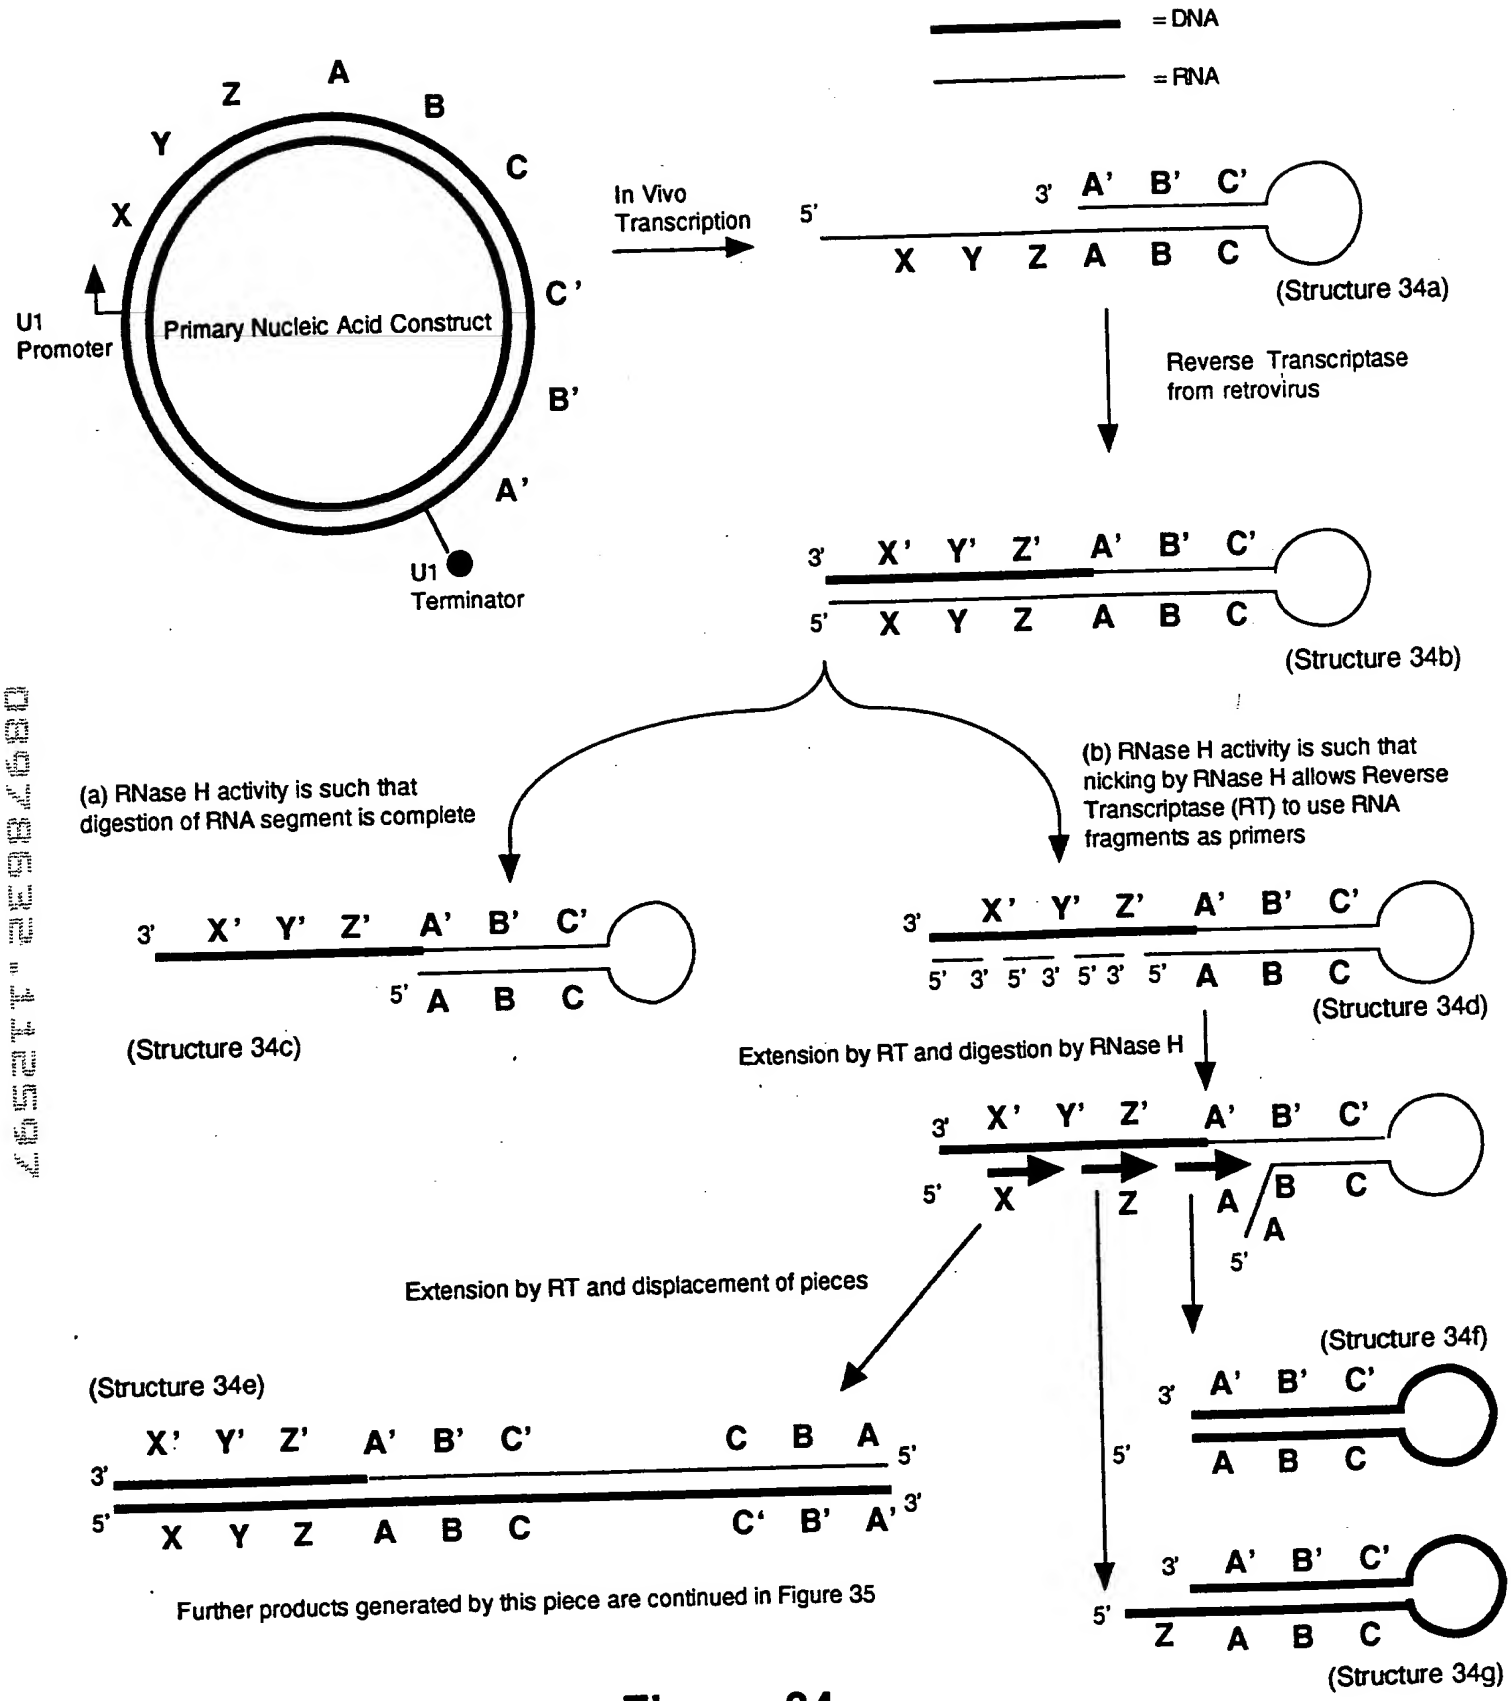

Figure 34

Construct that produces single-stranded Anti-Sense DNA

Continued from Figure 34

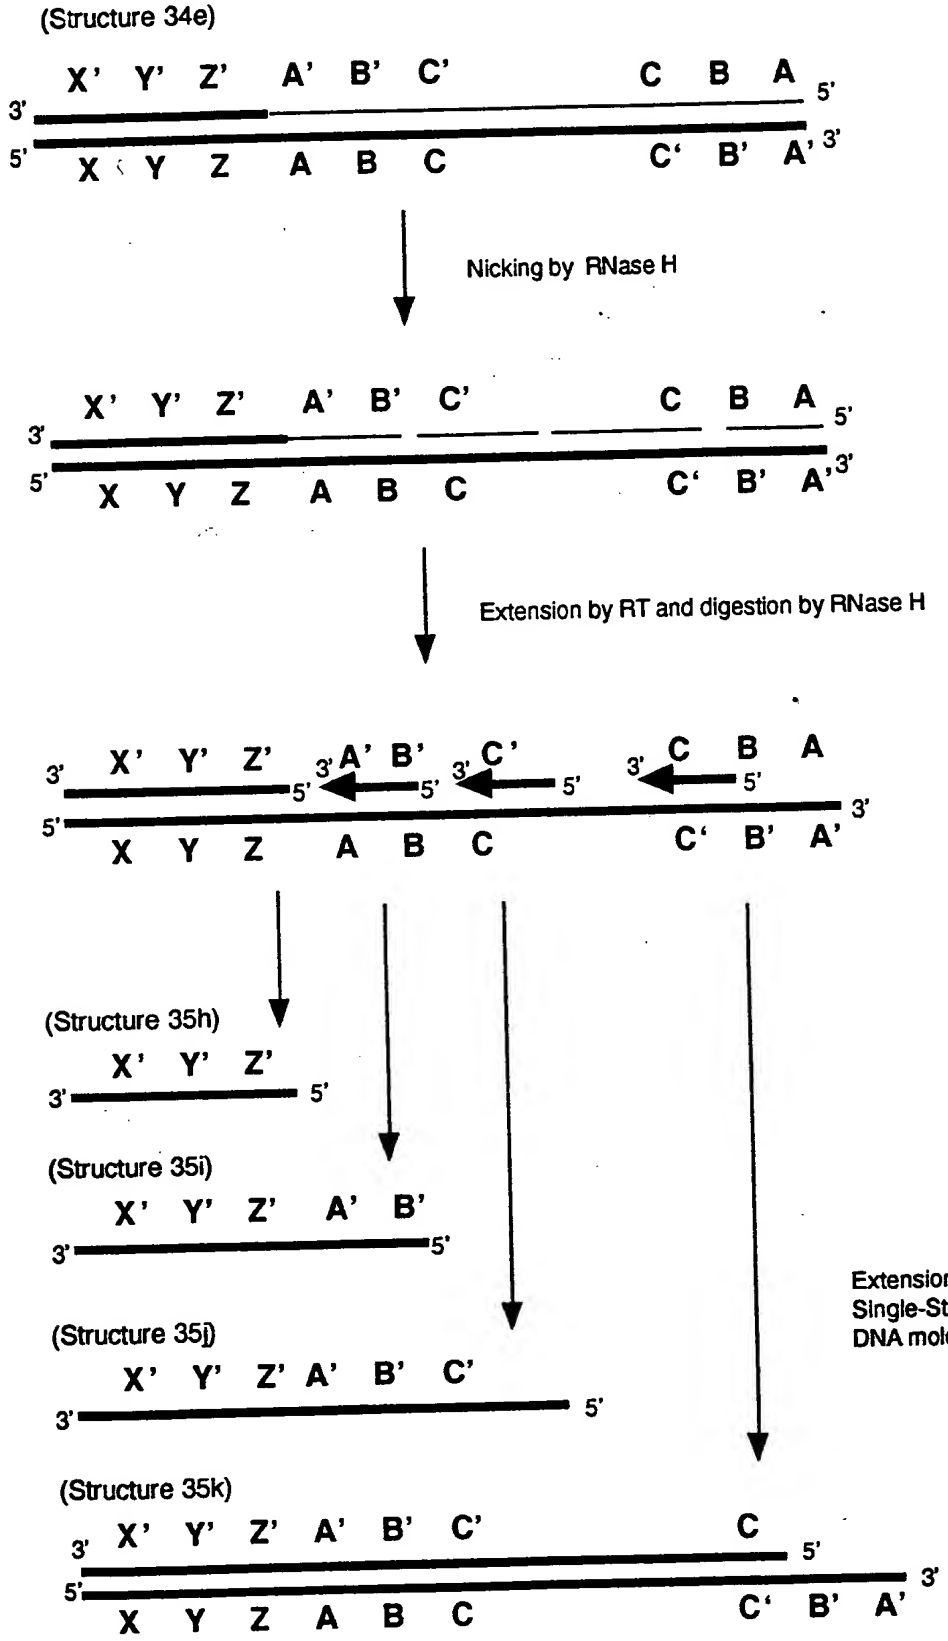

Figure 35
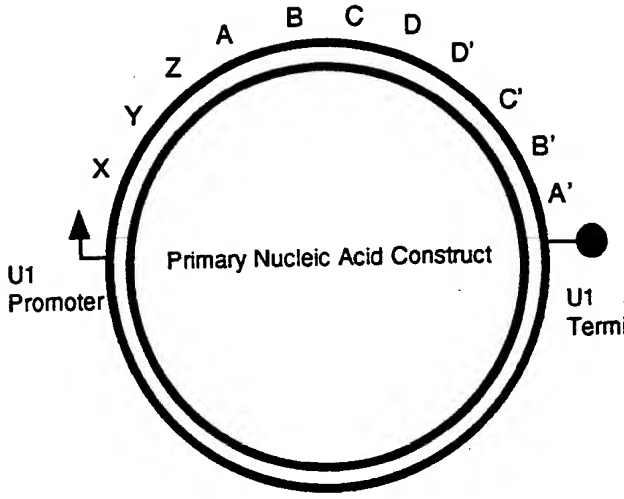
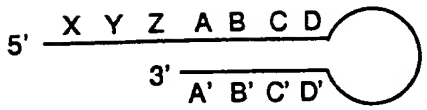
Continuation of Process from Figure 34



In Vivo Transcription

(Structure 36a)

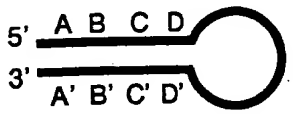


In a series of events similar to that shown for Example G-1, the net products of Rnase H and RT activities on the transcript above create Double-stranded DNA products similar to these below:

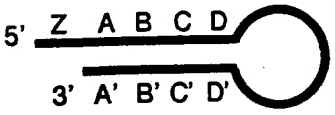
= DNA

= RNA

(Structure 36b)



+ (Structure 36c)

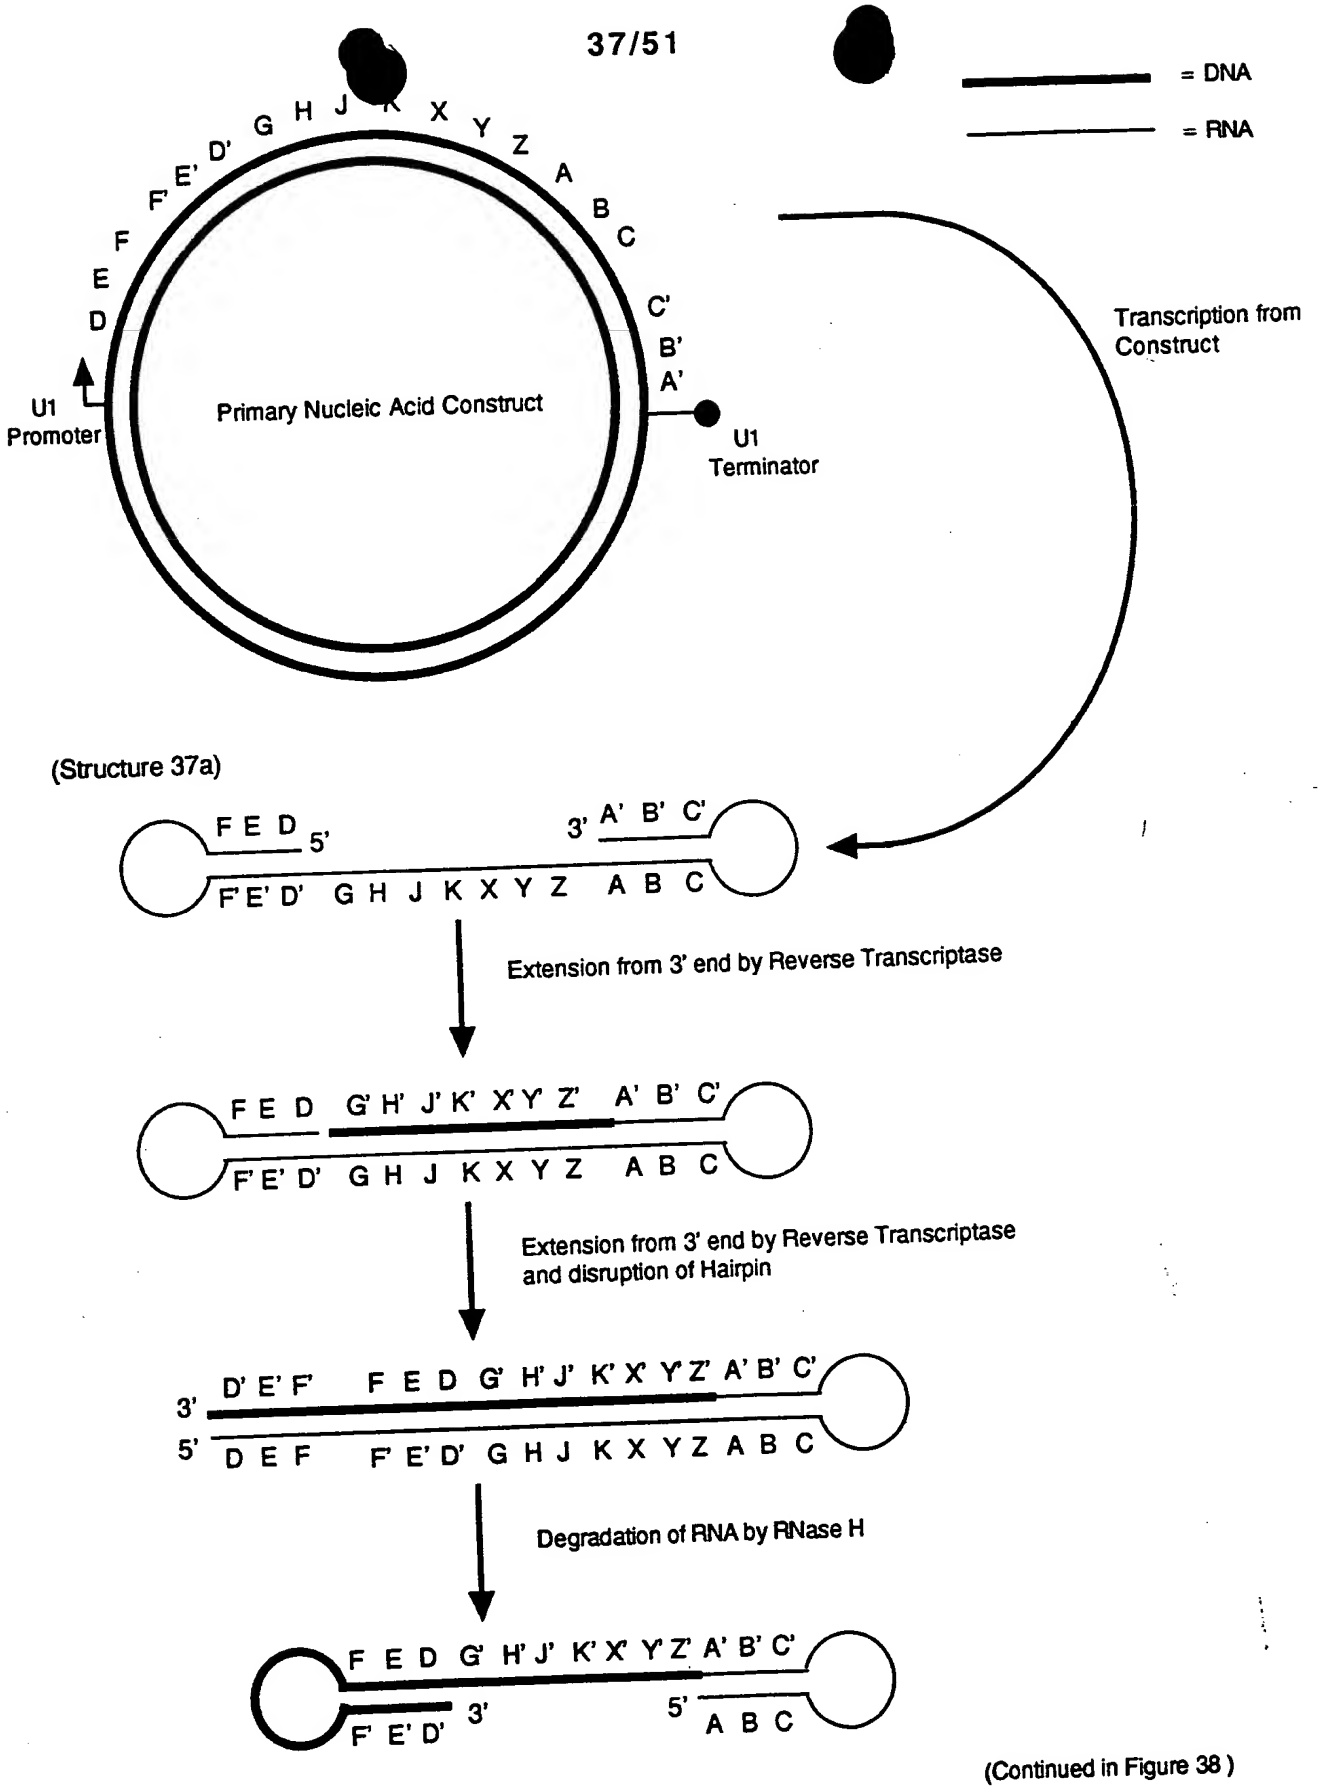


+ (Structure 36d)

In this example, A B C is a promoter sequence, directing transcription off of these Double-stranded DNA products to create RNA transcripts with varying amounts of double-stranded character. Furthermore, the single-stranded loop segment (D to D') of the transcript codes for anti-sense sequences

Figure 36

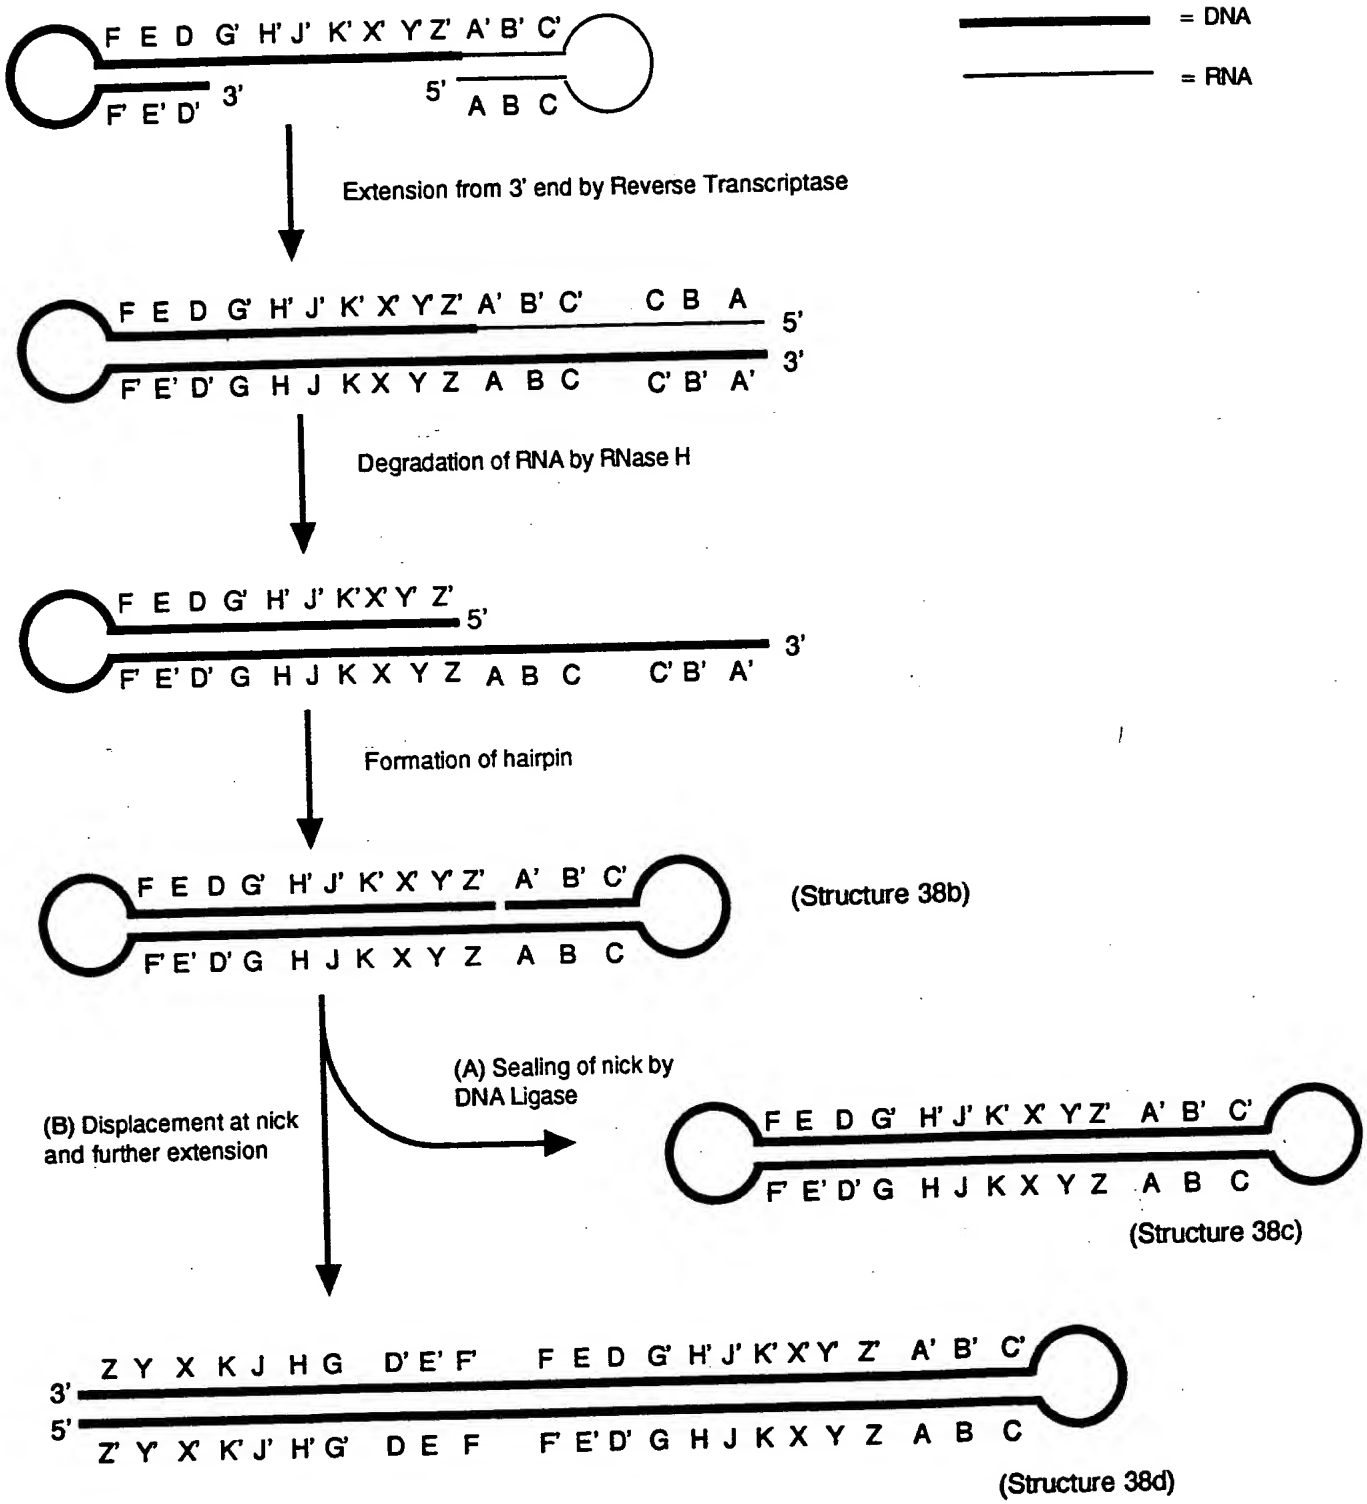
Construct that produces RNA that is Reverse Transcribed to create Secondary DNA Constructs capable of directing transcription



(Continued in Figure 38)

Figure 37

Construct which Propagates a Double Hairpin Production Center



In this Example, the sequence F' E' D' is a promoter, the sequence G H J K is an Anti-Sense sequence and X Y Z is a Poly A signal

Figure 38
